

Utilizing a New State of the Art Zirconia Implant System

Course Description

Zirconia dental implants are a rapidly growing discipline in the field of Dental Implantology. This course will review Zirconia Dental Implants: history, advancements in materials, implant designs, simplified prosthetics and how to incorporate digital workflows into your Zirconia Dental Implant practice. The new state of the art implant system will be demonstrated in cases requiring single tooth anterior replacement in the esthetic zone from full arch to full mouth reconstruction.

Learning Objectives:

- Understand the benefits Zirconia Dental Implants possess when compared to titanium implants
- Discuss how to create natural soft tissue contours in the esthetic zone utilizing the Zirconia Implant System, customized zirconia abutments and all zirconia definitive restorations
- Review surgical and prosthetic procedural guidelines and recommendations for utilizing the Zirconia Implant System
- Review the correct techniques to attain immediate implant stabilization in both hard and soft bone, and the correct steps to create immediate esthetic and functional provisional restorations at placement
